NEC 2014 Training
Where you want it. When you want it

Dear

The 2014 edition of the National Electrical Code[®] (NEC) is about to hit the streets. And there are quite a few changes from the 2011 edition. Changes that you must be aware of and implement to stay compliant and protect lives and property. So you will need some sort of training.

But what kind of training and who will provide it? Not to worry. There are learning and training options to see you through the process. But act now. Don't wait until you're cited for non-compliance.

So what do you do? You need someone to train you and your team as a group. So you all get the same information at the same time. And what if the training came to you?

If you need 10 or more team members trained in NEC 2014, the NFPA will send its experts to your facility to train you. On the job training or at least on the site training.

Having NFPA experts come to your site to train you has a number of significant advantages:

- You get the NFPA interpretation of what it meant when it revised the Code not someone's opinion of what the NFPA meant. And you all get the same interpretation; less arguments
- The NFPA instructors are nationally recognized training experts in the NEC because they helped to develop it. They live and breathe this 24/7.

Here's what a past participant in the NFPA on-site training had to say about it.

"..... Having NFPA's National Electrical Code[®] Essentials seminar at our facility was a great way to learn how the NEC addresses wire sizing, electrical work space and other concepts....."

-Melinda Ammerman, Product Safety Engineer, GE Energy,
Greenville, NC

(Over please)

Imagine how effective the training will be for your team when it is designed around problems they face every day on your (their) site. Don't you think they'll really remember what they learn as the NFPA experts lead them through the solutions to the problems and explains how to avoid them in the future.

Before you schedule or arrange your on-site seminar review the complete list of Electrical Seminars and the other life safety seminars available. You may find some that would mesh well with the NEC 2014 training for issues on your site. By talking to an NFPA consultant you can tailor make a seminar just for your site. No one-size-fits-all approach here.

The NFPA consultant for your area is:

Jay Polito
617-984-7541
jpolito@nfpa.org

So get on the phone to him right now to schedule your customized NEC 2014 seminar and sleep easy tonight. Remember these seminars are so well received that the fall seminar schedule is filling up rapidly.

P.S. Don't delay and miss out on this important seminar. Don't wait until you're cited for non-compliance. Do it now. The citation might cost more than the seminar.
